Short Passages (Items 61 – 69)

Passage 1

Millions of young people around the world now spend part of their free time watching streamers. They are people who broadcast themselves live on the internet while playing games, drawing, or simply chatting. What makes streaming different from ordinary videos is that everything happens in real time. Viewers type messages in a chat box, and the streamer can respond instantly, as if the two were having a conversation in the same room. This sense of connection is one of the main reasons streaming has become so popular.

However, building a large audience is harder than it looks. Successful streamers often spend years practicing, improving their equipment, and learning how to keep viewers interested. Behind every famous channel lies a great deal of hidden effort. Specialists who study children's health also offer **a word of caution**. While streaming can be entertaining and even educational, they advise young viewers to set clear limits, take regular breaks, and make sure that screen time never replaces sleep, exercise, or schoolwork.

61. What is this passage mainly about?
1. How streamers earn money from their live broadcasts
 2. The world of live streaming and some advice about watching it
 3. Why games are more popular than drawing or chatting
 4. The best equipment needed to become a famous streamer

62. According to the passage, what makes streaming different from ordinary online videos?
1. The audience can talk with the broadcaster as things happen.
 2. The broadcasts are always about playing video games.
 3. Viewers must pay before they are allowed to watch.
 4. The recordings can be watched again at any time.
63. Why do health specialists give “**a word of caution**”?
1. They believe streaming should be banned at all times.
 2. They want children to watch more documentary videos.
 3. They think streaming is always entertaining and never educational.
 4. They want young people to balance screen time with other activities.

Passage 2

In a school in Japan, an unusual student sits quietly at a desk near the window. It is a small robot named Mochi. Although it cannot walk, Mochi can turn its head, blink its lights, and speak in a gentle, friendly voice. The robot belongs to children who are too ill to attend school in person. Using a tablet from home, a sick student can control Mochi, see the whiteboard through its camera, listen to the lesson, and even raise the robot's hand to answer the teacher's questions.

The idea behind Mochi is simple but powerful. When children are absent for a long time, they often feel lonely and **fall behind in their studies**. Worse still, they may feel forgotten by their classmates. By giving these students a physical presence in the classroom, the robot helps them stay involved in daily life and keeps their friendships alive. Teachers have noticed that students who use Mochi tend to feel happier and recover their confidence more quickly. News of the invention has spread, and schools in other countries are now eager to welcome a robot of their own.

64. What is the best title for this passage?
1. The Difficulties of Students Who Cannot Walk
 2. How a Robot Helps Students Who Cannot Attend School
 3. Why Children in Japan Prefer Tablets to Textbooks
 4. A New Robot That Teaches Lessons in Japanese Schools
65. According to the passage, why is Mochi considered helpful for children who are absent for a long time?
1. It replaces the teacher so the children can study by themselves.
 2. It records every lesson so they can watch it many times later.
 3. It allows them to stay connected to their lessons and friends.
 4. It lets them finish school-work faster than other students.
66. In the second paragraph, the phrase “**fall behind in their studies**” is closest in meaning to...
1. make fewer mistakes than their classmates.
 2. progress more slowly than their classmates.
 3. lose their interest in learning new lessons.
 4. decide to leave school completely.

Passage 3

For decades, plastic waste has been collecting in the world's oceans, threatening the creatures that live there. Turtles mistake floating bags for jellyfish. Seabirds feed plastic to their chicks, and tiny pieces of broken plastic enter the food chain. Faced with this enormous challenge, a group of young inventors decided that doing nothing was not an option. Rather than waiting for governments to act, they designed a floating device that drifts gently across the surface of the sea.

The device is cleverly designed to **work with nature instead of against it**. It uses the natural movement of the wind and waves to guide drifting rubbish into a central trap, almost like an artificial coastline. Boats then collect the waste and bring it back to shore, where much of it is cleaned and recycled. Some of the recovered plastic is **transformed** into useful products such as shoes, bags, and sunglasses. The inventors admit that their machine alone cannot solve the whole problem. However, they remain hopeful. They argue that a single good idea, once shared widely, can inspire countless others and lead to change greater than anyone expected.

67. Why did the young inventors decide to act?
1. They were paid by the government
 2. They wanted to help jellyfish and little chicks.
 3. They needed plastic to make more plastic bags.
 4. They felt that doing nothing was unacceptable.
68. What does the phrase “**work with nature instead of against it**” mean?
1. The machine fights against the waves.
 2. The machine only works on coastlines.
 3. The machine uses natural forces.
 4. The machine destroys the ocean.
69. In the second paragraph, the word “**transformed**” is closest in meaning to...
1. converted
 2. collected
 3. replaced
 4. gathered

Long Passage (Items 70–73)

The Rise of “Brainrot”

If you have spent any time online recently, you may have come across strange characters with even stranger names: a ballerina with the head of a coffee cup called Ballerina Cappuccina, or a shark wearing shoes known as Tralalero Tralala. These bizarre creations are part of an internet trend that young people themselves have nicknamed “brainrot.” The word sounds like an insult, and in a way, it is meant to be. It jokingly describes silly, meaningless content that seems to “rot” your brain the more you watch it. Oddly enough, that is exactly why so many people find it funny.

Most brainrot characters are created using artificial intelligence, which can generate odd images and voices in seconds. A single video might last only a few seconds, but millions of people share and copy it, adding their own jokes and variations. Part of the appeal is that the humor makes no sense at all. Because the characters are so random, anyone can invent a new one, and the strangest ideas often spread the fastest. For many young people, understanding these jokes is a way of belonging. If you know who Ballerina Cappuccina is, you are “in” on the joke with millions of others.

Still, not everyone is **amused**. Some teachers and parents worry that this kind of content is designed to grab attention without offering anything valuable in return. They point out that endlessly scrolling through short, silly clips can make it harder to concentrate on schoolwork or longer activities. Defenders of the trend reply that it is simply harmless fun and a form of creativity. Perhaps the truth lies somewhere in the middle. Like many things online, brainrot is probably best enjoyed in small amounts. It is funny when shared with friends for a few minutes, but not something worth losing hours of your day over.

70. Why do many young people enjoy "brainrot" content?
1. It is created slowly and carefully by famous artists.
 2. Sharing the jokes makes them feel part of a group.
 3. It helps them concentrate for longer periods of time.
 4. It teaches them useful skills for their schoolwork.
71. In the third paragraph, the word "**amused**" is closest in meaning to:
1. worried
 2. confused
 3. interested
 4. entertained
72. According to the passage, what concern do some teachers and parents have about "brainrot"?
1. It may shorten children's attention span for studies and tasks.
 2. It can only be understood by adults, not by children.
 3. It costs too much money for young people to create.
 4. It takes a very long time to produce a single video.
73. What is the writer's overall opinion of the trend?
1. It should be banned completely.
 2. It is the most entertaining content on the internet.
 3. It is harmless and can be watched for many hours.
 4. It can be enjoyable in small amounts but not in excess.
