**Two Great Birthdays**

George Washington and Abraham Lincoln were born in the month of February. Both presidents have monuments in our nation's capital, Washington D.C. Each year, we celebrate their lives and achievements in Presidents Day, the third Monday in February.

George Washington was the first President of the United States, from 1789 to 1797. He was born February 22, 1732, in Virginia. The Washington Monument honors Washington's life. It is a tall stone obelisk. An obelisk is a four-sided stone tower. Inside, 897 steps take visitors to a room near the top. What a view!

Abraham Lincoln was the 16th President of the United States, from 1861 to 1865. He was born February 12, 1809, in Kentucky. The Lincoln Memorial looks like a Greek temple. It is a building with three rooms. A statue of Abraham Lincoln sits in the center room.

**It's All About Energy and Matter**

Energy is everything in the universe that is not matter. It's not a solid, a liquid, or a gas – and it's everywhere around us. It's what gets everything in the universe going. Heat, light, sound, and motion are all different forms of energy. Energy can change forms, but it can never be made and it can never be ended. In fact, the states that energy can neither be created nor destroyed, but it can be transformed from one form to another.

Energy can be converted into matter and matter can be converted to energy. For example, although we cannot see it, we know there is a core of matter at the very center of the sun. That fiery glow that surrounds the sun is caused by that core of matter being converted into energy. This is what causes all stars to shine.

It was Albert Einstein who, in 1905, first theorized that all matter contained the possibility of being converted into energy. In fact, the tiniest amounts of mass could actually be converted into huge amounts of energy. He came up with an equation that could be used to figure out how much energy any amount of matter might actually contain.

His theory on the relationship between matter and energy revolutionized the way scientists viewed the universe. Much of what we know about how the universe works today is due to the work of Albert Einstein.
